

Nelius White Paper

More Publicity, More Funds

What is Nelius?

Nelius is the realization of a simple idea — to provide programs and events with the publicity and funding they need to thrive. It's a network built to support events through a unique community-powered model. The support system is driven by holders of the Nelius utility token, creating a loop where visibility meets value.

Key Participants in the Nelius Network

There are two main players in the Nelius ecosystem:

- Event Owners
- Token Holders

Event Owners

Event Owners are individuals or organizations that have been accepted by Nelius to receive support. Once admitted, their events can start receiving donations from the Nelius network.

How Events are Funded:

- Events eligible for support will receive donations proportional to their publicity score — a measure of how much awareness and attention the event is generating.

Token Holders

Token Holders are those who own the Nelius utility token, whether in a cold or hot wallet.

Roles of Token Holders:

- Stake tokens to vote for events they believe deserve support.
- The more tokens a person stakes, the more voting power they hold.
- Events with the highest number of votes receive support during each funding cycle.

Rewards for Token Holders:

- A portion of donations made to events is shared with voters.
- Voter rewards are based on two things: how much they staked, and the final publicity score of the event(s) they supported.

Origin Story

Nelius was originally inspired by a desire to help church programs get the visibility and support they often need. But as the idea matured, it became clear that many events and

programs — across different communities — face the same challenges. Nelius is for them too.

Roadmap to Full Decentralization

Nelius is on a journey to becoming fully decentralized.

Timeline:

- Starting in 2025, the goal is to reach full decentralization within 3 to 4 years.
- Over time, events of all kinds — social, educational, career — will be able to explore new ways to engage with and benefit from Nelius.

In its early stages, Nelius will focus mainly on helping church events, while staying open to supporting other types of events along the way.

Nelius Utility Token

The utility token at the heart of Nelius is a donation token.

Key Features:

- 10% of every transaction made with the token is sent to a dedicated wallet.
- These funds are exchanged for digital assets like Bitcoin and distributed to early adopters of Nelius.

Future Considerations:

- Future updates to this white paper will explain how new users can still access this reward system, even if they join after the initial rollout.

This document will continue to evolve as Nelius grows and develops, reflecting progress, upgrades, and new opportunities.
